

Base de Datos – Programmasy

Especificación de las tablas:

Tabla: Usuarios

- UsseID INT PRIMARY KEY
- UsseName VARCHAR (80)
- Email VARCHAR (100)
- Phone VARCHAR (50)
- EstadoID INT
- MatricID INT
- RegistrarID INT

Tabla: Estados

- EstadoID INT PRIMARY KEY
- StatusUsse VARCHAR (20)

Tabla: Cursos

- CoursesID INT PRIMARY KEY
- CourseName VARCHAR (50)
- CourseDescription VARCHAR (100)
- CategoryID INT
- LevelID INT

Tabla: Matriculación

- MatricID INT PRIMARY KEY
- Enrolled INT
- CoursesID INT

Tabla: Niveles

- LevelID INT PRIMARY KEY
- LevelCourse VARCHAR (10)

Tabla: Registro

- RegistrarID INT PRIMARY KEY
- NumParticipants INT
- EventsID INT

Tabla: Eventos

- EventsID INT PRIMARY KEY
- EventName VARCHAR (100)
- EventDescription VARCHAR (200)
- EventDate DATE
- VersusID INT

Tabla: Versus

- VersusID INT PRIMARY KEY
- VersusParticipants VARCHAR (100)
- VersusCode CHAR (30)
- VersusTime TIME

Tabla: Categorías

- CategoryID INT PRIMARY KEY
- CategoryName VARCHAR (100)
- SuppliersID INT

Tabla: Proveedores

- SuppliersID INT PRIMARY KEY
- SuppliersName VARCHAR (100)
- ProductName VARCHAR (100)
- CategoryProduct VARCHAR (100)

Tabla: Publicidad

- PublicID INT PRIMARY KEY
- PublicDescription VARCHAR (100)
- Payment FLOAT

Scrip:

```
create database Programasy;  
use Programasy;
```

```
create table Usuarios(  
  UsserID INT PRIMARY KEY, UsserName VARCHAR (80), Email VARCHAR  
  (100), Phone VARCHAR (50), StatusID INT, MatricID INT, RegistrarID INT  
);
```

```
create table Estados(  
  StatusID INT PRIMARY KEY, StatusUsser VARCHAR (20)  
);
```

```
create table Cursos(  
  CoursesID INT PRIMARY KEY, CourseName VARCHAR  
  (50), CourseDescription VARCHAR (100), CategoryID INT, LevelID INT,
```

);

```
create table Matriculados(  
MatricID INT PRIMARY KEY, Enrolled INT, CoursesID INT  
);
```

```
create table Niveles(  
LevelID INT PRIMARY KEY, LevelCourse VARCHAR (10)  
);
```

```
Create table Categorias(  
CategoryID INT PRIMARY KEY, CategoryName VARCHAR (100),  
SuppliersID INT  
);
```

```
Create table Registro(  
RegistrarID INT PRIMARY KEY, ParticipannNumber INT, EventsID INT  
);
```

```
create table Eventos(  
EventsID INT PRIMARY KEY, EventName VARCHAR (100),  
EventDescription VARCHAR (200), EventDate DATE, VersusID INT  
);
```

```
create table Versus(  
VersusID INT PRIMARY KEY, VersusParticipants VARCHAR (100),  
VersusCode CHAR (3), VersusTime TIME  
);
```

```
create table Proovedores(  
SuppliersID INT PRIMARY KEY, SuppliersName VARCHAR (100),  
ProductName VARCHAR (100), ProductDescription VARCHAR (100)  
);
```

```
Create table Publicidad(  
PublicID INT PRIMARY KEY, PublicDescription VARCHAR (100), Payment  
FLOAT  
);
```

Relación entre tablas:

```
ALTER TABLE Categorías  
ADD CONSTRAINT fk_ASuppliers FOREIGN KEY (SuppliersID)  
REFERENCES Proovedores (SuppliersID);
```

```
ALTER TABLE Usuarios  
ADD CONSTRAINT fk_Astatus FOREIGN KEY (StatusID) REFERENCES  
Estados(StatusID);
```

```
ALTER TABLE Usuarios  
ADD CONSTRAINT fk_ARegistrar FOREIGN KEY (RegistrarID)  
REFERENCES Registro (RegistrarID);
```

```
ALTER TABLE Usuarios  
ADD CONSTRAINT fk_AMatric FOREIGN KEY (MatricID) REFERENCES  
Matriculacion (MatricID);
```

```
ALTER TABLE Cursos  
ADD CONSTRAINT fk_ALevel FOREIGN KEY (LevelID) REFERENCES  
Niveles(LevelID);
```

```
ALTER TABLE Cursos
ADD CONSTRAINT fk_ACategory FOREIGN KEY (CategoryID)
REFERENCES Categorias (CategoryID);
```

```
ALTER TABLE Eventos
ADD CONSTRAINT fk_AVersus FOREIGN KEY (VersusID) REFERENCES
Versus(VersusID);
```

```
ALTER TABLE Matriculados
ADD CONSTRAINT fk_ACourses FOREIGN KEY (CoursesID) REFERENCES
Cursos (CoursesID);
```

```
ALTER TABLE Registro
ADD CONSTRAINT fk_AEvents FOREIGN KEY (EventsID) REFERENCES
Eventos (EventsID);
```
